

SIZING GUIDE

PELVIC SECTION

Ideal is to fit the orthosis at mid-pelvic girdle to obtain firm grasp and control of the pelvis. Depending on anatomy, final fitting location may vary from just below the waist (navel) to mid pelvic girdle.

THIGH CUFFS

Ideal is to fit the cuffs as distal as possible without creating pressure or interference in the popliteal area. However, pressure on the thorax, excessive spinal flexion, or discomfort due to hamstring tightness, may be relieved by moving the cuffs up 1-3 inches.

UPRIGHTS

Measure waist to midpatella. At final fitting, should be shortened to level of distal thigh cuff padding. 115 = narrow sitting base, 123 = wide sitting base.

NOTE: Color Coding indicates interchangeable components.
